

BCWipe™

Securely Erase Files & Folders

For Windows, Mac & UNIX

ERASE BEYOND RECOVERY

For over 15 years, BCWipe has been the wiping utility of choice for the U.S. Defense Community and is widely accepted as the de facto standard to clean up classified data spills – also known as contaminations or classified message incidents.

Use cases for BCWipe:

- Files moved to the wrong location
- Accidental email distribution
- Modified documents containing 'Tracked Changes'
- DoD classification changes

BCWipe offers peace of mind and full compliance with multiple regulations, including NIST SP 800-88, GDPR, HIPAA and PCI DSS.

In addition, use Jetico Central Manager (JCM) to save time, resources and money. JCM is the ideal solution for Administrators that need to centrally deploy and distribute wiping policies.

MAIN FEATURES

Secure Erasure

Securely erase all traces of unwanted files beyond forensic recovery.

Industry-Best Support for SSD

Wipe SSDs faster and more efficiently with unique Reserved Space feature.

Wiping Schemes

Choose from 15+ schemes for compliance, e.g. DoD or NIST.

Wiping Reports & Audit Logs

Retrieve wiping reports and review audit logs for compliance.

Central Management

Remotely wipe selected files without end-user intervention.

BENEFITS & ADVANTAGES

Privacy for peace of mind

Compliance with regulations

Flexible licensing options

Faster incident response

Ongoing cyber hygiene

TECHNICAL SPECIFICATIONS

Commands

- Wipe files, folders, and compressed files with ease
- Wipe Data Remanence, including free space, file slack space, swap files, MFT records, directory entries, NTFS log files and directory slack space
- Wipe browser history
- Wipe user activities
- Encrypt swap file

Tools

- Transparent Wiping to automatically wipe deleted or temp files on the fly
- Reserved Space Manager to save time by preserving wiped free space in a clean state
- BCWipe Task Manager to set scheduled wiping tasks
- Disk-Level Verification to run advanced verification of wiping processes on low disk level
- Wiping Scheme Creator to customize wiping schemes or read existing ones from files
- Log File Viewer to monitor wiping processes while still running
- BCWipe Privacy Guard to disable Microsoft's default tracking features

DEPLOYMENT OPTIONS

Standalone Endpoints

Install, activate and manage BCWipe on standalone endpoints. Combine with a Server license to extend wiping capabilities to your network drives. Best for smaller teams.

Central Management

Deploy and manage BCWipe from a central console. Wipe files remotely without end-user intervention. Keep track of all wiping activities with extensive log files and reports. Best for large and medium teams.

Incident Response

Use BCWipe only when needed with a flexible Data Spills license. One license can be used on an unlimited number of endpoints over the course of a year, one endpoint at a time. Best for data-spill cleanups.

NEED TO WIPE ENTIRE HARD DRIVES?

Use **BCWipe Total WipeOut** to securely erase hard drives at end of life — decommission, dispose, sell, donate
